

Excellent response to Shermann amplifier launch

"It's like returning to those days of great gigs where we had power to spare with everything sounding realistic and warm".

That was one end user's comment after he tried the new Shermann 410A four channel power amplifier.

And it's so true.

Systems sound better with good amplifiers driving them and they don't come much better than the new Shermann amps.

Great sound, minimal weight - built in Britain too.

The class AB design of the full range models offers amazing detail and clarity whereas for low end we have class G versions with amazing cone control and depth of response.

Believe the prices.

Starting at a 2 x 380w 1U model our prices are, to say the least, competitive!

Try to forget the competitive prices and consider the quality of these finely constructed products.

Shermann amps are engineered for actual performance rather than anticipated so they easily outperform the competition.

They also have power to spare and probably the cleanest high quality sound in the business.

The 410A - 10kgs - 4 x 1,000w - time for a demo!

G1 System
at our new website**

Don't forget our **D Series** _ for installations or live events.

Shermann's D Series, designed to cover multiple tasks at sensible prices.

Black or colours, stacked or flying it's all second nature to us.

When it has to be so much better and it has to be special call or email Shermann.

Shermann speaker and amplifier systems not only work well they invariably last longer - a cost efficient reason to invest.

Take a look at our website or contact us for the information that will lead to better sound in your theatre, church or virtually any style of venue.

CSP Audio-Visual go active

Up in Deeside they like their sound levels and their quality so we've just helped **CSP Audio-Visual** to get that little bit more from their own system.

We've just converted their **Shermann G5** boxes from passive to active drive.

From the first gig following the change Steve Williams from CSP has been singing the praises - and he was happy with the system before it went to active drive.

"For such a compact box they have so much to give - nothing else comes close.

I'm sure they're offering similar levels to the RS5" said Steve.

Shermann's G5 features a coaxial compression driver on a rotatable 60° x 40° horn.

A high efficiency 15" completes the line up in this superb Shermann FOH model.

System Offer.

V25 tops, the new **GS25** dual 15" super subs, K&M poles, Ashly 3:6SP processor, a Shermann 210A amp (2 x 1kw) and a Shermann 218G amp (2 x 1.8kw).

Amazing performance - stunning price - minimal size.
